and fully installed from Price on request. (Terms & Conditions apply)

Razor Wire 500mm High with galvanized stays and stainless steel support strands x 2

Fully installed Price on request. (Terms and Conditions apply)

Features: D5 Centurion Gate Motor

The thoroughbred range of DC operators offer swift and reliable sliding gate control. The D5 unit is powered by a high torque DC motor coupled to a custom built gearbox.

The system uses a 12V maintenance free battery as the primary power source. The battery is charged via a mains supply or solar panel. For light industrial applications the D5 is available with a power pack which delivers the full current requirement of the motor.

The principle features of the system are:

- CUSTOM BUILT GEARBOX – made from advanced engineering materials for corrosion-free strength and durability.
- ROBUST LUBRICATED GEARSET - ensures extended life and secure locking.
- REVOLUTIONARY INTERNAL LIMIT SWITCH (DOSS) – for pin point stopping and easy installation. Novel gate referenced origin ensures that the end limit positions are never lost even if the gate is accidentally knocked off its rail and repositioned differently.
- SENSITIVE ANTI CRUSHING CONTROL – for greater safety.
- PROVEN SURGE AND LIGHTNING PROTECTION – for added reliability.
- INTERNAL MANUAL RELEASE – with lockable access door for greater security.
- UNINTERRUPTED OPERATION – using safe low voltage battery driven DC motor.
- FAST OPERATING SPEED – offers greater security and convenience with smooth acceleration and deceleration.

MULTIPLE FEATURES – to suit a wide variety of applications.
